Red flags - call Dr. Renish the same day

- Fasting sugar above 300 on two mornings, or any reading below 70 (shaky, sweaty, confused - treat with 3 glucose tablets / half glass juice first, recheck in 15 min).
- Vomiting more than twice in a day, cannot keep water down, or severe stomach pain (Mounjaro side-effects that need attention).
- Weight falling faster than 1.5 kg in the week.
- Any new medicine, fever or illness - sugar readings change and the plan may need to pause.

Assumptions: single adult following the plan; both veg and non-veg eaten (fish/chicken swap to 60 g paneer, 1 extra egg or 1 cup dal on any day); a fridge with a freezer compartment is available; standard spices already at home; Mounjaro is the only sugar-lowering medicine (if not, confirm with the doctor before starting). Costs are estimates and vary by market.
